

*Erin Spring***EDUC 427.01: STEM Education**  
**Early Childhood**  
**Fall, 2025**

**Land Acknowledgement:** *The University of Calgary, located in the heart of Southern Alberta, both acknowledges and pays tribute to the traditional territories of the peoples of Treaty 7, which include the Blackfoot Confederacy (comprised of the Siksika, the Piikani, and the Kainai First Nations), the Tsuut'ina First Nation, and the Stoney Nakoda (including Chiniki, Bearspaw, and Goodstoney First Nations). The City of Calgary is also home to the Métis Nation of Alberta (Districts 5 and 6).*

**Class Dates:** September 2- December 5, 2025

**Truth and Reconciliation Day:** September 30, 2025

**Term Break:** November 10-14, 2025

**Field Experience I:** October 6-17, 2025

**Last Day to Add/Drop/Swap:** Due to the non-standard dates associated with this program, please check your Student Centre for the important dates pertaining to your section.

**Pre-requisite:** Due to the multiple pathways in the Bachelor of Education, please consult Undergraduate Programs in Education for questions related to pre-requisite courses.

**Office Hours:** By appointment only

**Email:** Students are required to use a University of Calgary (@ucalgary.ca) email address for all correspondence.

**COURSE DESCRIPTION:**

EDUC 427 (STEM Education): This course introduces key elements of Science, Technology, Engineering, and Mathematics (STEM) education, including curriculum, pedagogy, standards, and assessment. This interdisciplinary course is for all first-year education students. The intent of the course is to foster an understanding of how STEM can inform and be used to shape teaching and learning across grade levels and subject areas. In so doing, participants will attend to STEM's role in culture and society.

**LEARNER OUTCOMES:**

Course participants will:

- 1) Develop a foundational understanding of the nature of discourse in STEM disciplines;
- 2) Develop pedagogical knowledge through the work of *relearning* mathematics curriculum content. The *relearning* of a math concept is a method for developing mathematical thinking and understanding math for teaching and learning;
- 3) Understand and appreciate the STEM disciplinary processes of mathematics, science, and computational thinking, and the engineering design process that contribute to teaching and learning of mathematics and science;
- 4) Design learning environments in STEM; and,
- 5) Apply introductory literature related to the teaching of STEM with an emphasis on mathematics, the implementation of resources, the classroom environment, diverse and innovative methods of teaching within STEM, and an introduction to the Alberta Curriculum and Programs of Study.

**COURSE DESIGN AND DELIVERY:** This course will be delivered face-to-face on campus with possible engagement in a D2L environment. The course will be delivered through a design-based and inquiry-focused approach where learning intent, expectations and assessment processes are made visible and transparent. Participation is crucial to the knowledge building in this course. Students will require access to a computing device that contains current software and hardware capable of running D2L, creating documents for learning tasks, and running free programming platform software such as Scratch. If you do not own a personal device, there are computers available for student use in the Doucette library and the Taylor Family Digital Library.

After the *course is completed*, you may be invited to participate in research involved in this course. The instructors will not know whether you will be participating in the research.

### LEARNING TASKS OVERVIEW

Completion of all assigned tasks is required for a passing grade in the course. All tasks should follow the American Psychology Association (APA) style 7<sup>th</sup> Edition for in-text citations and references.

Regular and active participation is an essential aspect of any community knowledge building. Participation means interacting during class conversations and discussions, engaging in class tasks and activities.

You are expected to engage fully in the knowledge building community, demonstrating that you have reviewed the assigned weekly readings, reflected critically on what you have read and what you have contributed to knowledge building, and that you are engaging with peers in a collaborative and supportive dialogue.

**Note:** Each instructor will bring different sets of expertise to this course and therefore each course might be enacted slightly differently, including the **pace** for **Topics** and **specifics** from **Readings**. Each instructor may supplement weekly readings from the Additional Resource List. Please refer to instruction from your course instructor on specific enactment of the learning tasks and activities for your section, including engagement with generative AI (see AI statement for Learning Tasks below).

| LEARNING TASK | DESCRIPTION OF LEARNING TASK  | GROUP /<br>INDIVIDUAL | WEIGHT  | DUE DATE  |
|---------------|---|-----------------------|---|---|
| LT1           | <p><i>LT1 – Build Understanding of STEM Disciplines, STEM as Interdisciplinary Problem Solving, and Teaching STEM (Reflective Learning)</i></p> <p><b>Part A: Journal Entry: Initial Thoughts</b></p> <p><b>Part B: Journal Entry: End of Course Understandings</b></p> <p>Learning Outcomes 1, 2, 3, and 5</p> | Individual            | <p><b>Part A:</b><br/>15%</p> <p><b>Part B:</b><br/>25%</p> | <p><b>Part A:</b><br/>Due <b>Sept. 15</b><br/>in D2L<br/>Dropbox</p> <p><b>Part B:</b> Due<br/><b>Dec. 5</b> in D2L<br/>Dropbox</p> |

#### CHANGES TO SCHEDULE:

Please note that changes to the schedule may occur to meet the emerging needs and dynamics of the participants in the course.

#### LEARNING TASKS AND ASSESSMENT

##### Generative AI :

- AI tools can be used for creating assignment outlines or critiquing drafts, but the final work must be original.
- Students must not copy or paraphrase from AI applications for assignments
- AI tools will be prohibited for major assignments, or research papers but allowed for information gathering.
- All other considerations for AI use must be cleared with the instructor.

There are three required Learning Tasks for this course.

#### **LT1 – Build Understanding of STEM Disciplines, STEM as Interdisciplinary Problem Solving, and Teaching STEM – Reflective Learning (40%) – Due: September 15 and December 5**

This learning task has two parts. The intent is to capture your initial understandings and then reflect upon your growth of new insights about STEM education. *You may find that daily journal writing, photos, or videos of your thinking/work will support your knowledge development for LT1.*

**Part A (15%):** Students will write an initial summary of their understanding about what the purpose of STEM Education and the nature of the STEM disciplines. This will be in the form of a journal narrative or essay format with a 500 word maximum.

**Part B (25%):** Students will write about their new insights of STEM Education, nature of STEM disciplines, and how inquiry-based, problem-based STEM pedagogies will inform their future teaching practices. This work will be in the form of a journal narrative or essay format within a range of 500-750 words.

#### **Criteria For Assessment of Learning Task 1: Part A**

| Criteria   | Excellent (A+ to A)   | Good (A- to B)  | Satisfactory (B- to C)   | Unsatisfactory   |
|--|---|---|--|--|
| <b>STEM Education. (35%)</b>   | Student can demonstrate an honest statement of place in understanding of STEM Education through meaningful reflections and references to course readings and learning experiences                                   | Student demonstrates a good understanding of their initial understanding of STEM Education through course reflections and some meaningful references to course readings and learning experiences.                     | Student is still developing an understanding of STEM Education and from the course readings and course learning experiences.   | Student is not demonstrating an understanding of STEM Education from the course readings and learning experiences.                 |
| <b>Developing knowledge about the nature of STEM disciplines. (35%)</b>              | Student can demonstrate an honest statement about current understandings regarding the nature of STEM disciplines through meaningful reflections and thoughts about excitements, and concerns about this knowledge. | Student demonstrates a reasonable statement of initial understandings regarding the nature of STEM disciplines through course reflections and some meaningful references to course readings and learning experiences. | Student is still developing an understanding of the nature of STEM disciplines from the course readings and course learning experiences.   | Student is not demonstrating an understanding of the nature of STEM disciplines from the course readings and learning experiences. |
| <b>Correct and meaningful citations of course readings and other resources (15%)</b> | The references are meaningful and properly cited in APA 7 <sup>th</sup> edition.  | Most of the citations are meaningful to the student's work.<br><br>There are one to two mistake(s) found in the APA 7 references (e.g. missing comma, period, italics, etc.).   | Few of the citations are meaningful to the student's work.<br><br>There are three to four mistakes in the APA 7 references.  | Citations are not meaningful for the student's work.<br><br>There are more than four mistakes in the APA 7 reference list.         |
| <b>Organization and Presentation Clarity (15%)</b>                                   | The student's journal writing of STEM learning is easy to follow, clarity in thoughts, and relatability to course readings and/or course learning experiences.  | The student's journal writing of STEM learning has some key points, sections of work may lack clarity or relatability to the course readings and/or course learning experiences.                                      | The student's journal writing of STEM learning is difficult to understand and does not present a progression of developing a deeper understanding of STEM education. Points lack clarity or relatability to course readings and/or learning experiences. | Student is unable to present a coherent demonstration of work and learning.  |

**Criteria For Assessment of Learning Task 1: Part B**

| Criteria | Excellent (A+ to A) | Good (A- to B) | Satisfactory (B- to C) | Unsatisfactory |
|----------|---------------------|----------------|------------------------|----------------|
|----------|---------------------|----------------|------------------------|----------------|

|   |  |   |  |  |
|---|--|---|--|--|
| <b>Knowledge Development about STEM Education and disciplinary thinking processes. (30%)</b><br><b>Meaningful References (10%)</b>                  | Student can demonstrate a robust <b>understanding of STEM Education</b> and <b>disciplinary thinking processes</b> through <b>meaningful reflections</b> and <u>references</u> to course readings and learning experiences | Student demonstrates a good understanding of STEM Education and disciplinary thinking processes through course reflections and some meaningful references to course readings and learning experiences.          | Student is still developing an understanding of STEM Education and disciplinary thinking processes from the course readings and course learning experiences.   | Student is not demonstrating an understanding of STEM Education and disciplinary thinking processes from the course readings and learning experiences. |
| <b>Reflection on how inquiry-based, problem-based pedagogies will inform future teaching practices. (25%)</b><br><b>Meaningful References (10%)</b> | Student can demonstrate a robust understanding of how STEM pedagogies will <b>inform their future teaching practices</b> through <b>meaningful reflections</b> and references to course readings and learning experiences  | Student demonstrates a good understanding of STEM pedagogies will inform their future teaching practices through course reflections and some meaningful references to course readings and learning experiences. | Student is still developing an understanding of STEM pedagogies from the course readings and course learning experiences.  | Student is not demonstrating an understanding of STEM pedagogies from the course readings and learning experiences.                                    |
| <b>Correct citations of course readings and other resources</b><br><b>APA 7 (10%)</b>   | The references are meaningful and properly cited in APA 7 <sup>th</sup> edition.   | Most of the citations are meaningful to the student's work.<br><br>There are one to two mistake(s) found in the APA 7 references (e.g. missing comma, period, italics, etc.).                                   | Few of the citations are meaningful to the student's work.<br><br>There are three to four mistakes in the APA 7 references.  | Citations are not meaningful for the student's work.<br><br>There are more than four mistakes in the APA 7 reference list.                             |
| <b>Organization and Presentation Clarity (15%)</b>  | The student's journal writing of STEM learning is easy to follow, clarity in thoughts, and relatability to course readings and/or course learning experiences.   | The student's journal writing of STEM learning has some key points, sections of work may lack clarity or relatability to the course readings and/or course learning experiences.                                | The student's journal writing of STEM learning is difficult to understand and does not present a progression of developing a deeper understanding of STEM education. Points lack clarity or relatability to course readings and/or learning experiences. | Student is unable to present a coherent demonstration of work and learning.  |

**LT2 – Building Understanding of the M in STEM through *Relearning* a Key Math Concept (30%)**  
**Due: October 3**

Students will:

- Select a math concept from the book *Elementary and Middle School Mathematics*, for developing deeper understanding of symbolic notations, operations, and/or contextual meanings (units and measurement); [Concepts: Select from Chapters 7, 8, 9, 10, 11, 12, 13, 14, 15, 18, 19. You may use additional resources.]
- Discuss and confirm math concept selection with your instructor (to avoid whole class doing same concept);
- Explore multiple representations for a math concept that is present within the Alberta Curriculum;

- Explain the difference between a math visual and manipulative;
- Discuss your role as a math learner and math teacher;
- Discuss what you learned through the *relearning* process and how this will inform your future teaching practice.
- Prepare to share a highlight, ah-ha moment, short activity, or new insight gained from your math relearning work. This can be in the form of a short in-class sharing presentation (2 minutes) or in a D2L forum. Your instructor will decide on the format. Purpose of this short sharing piece is to learn from one another. This is not sharing your entire LT2 work with the class.

*You may find that daily journal writing, photos, and examples of your messy work, or videos of your thinking/work will support your knowledge development for LT2.*

This learning task is a personal narrative to share your insights from this *relearning* process. This personal narrative will include a detailed description of the selected math concept, knowledge development of the concept through definitions, visuals, manipulatives, context (units), and connections to other math concepts. Photos of your personal work with math visuals, manipulatives, and/or paper and pencil work will accompany your written descriptions. This can be composed through PowerPoint slides, Word document, or a medium acceptable by your instructor. As a guide for written text, please consider 500-1000 words for your written work.

### Criteria For Assessment of Learning Task 2

| Criteria  | Excellent (A+ to A)   | Good (A- to B)   | Satisfactory (B- to C)   | Unsatisfactory  |
|---|---|--|--|---|
| <b>Knowledge Development through <i>relearning</i> of a Math Concept(s)</b><br>(30%)  | Student can demonstrate a robust understanding of a select mathematics concept. Multiple representations and/or connections to other mathematics concepts are accurately portrayed in student's personal engagement of the work.  | Student demonstrates a good understanding of select mathematics concept(s). Minimal representations and/or connections to other mathematics concepts are portrayed in student's personal engagement of the work.   | Student is still developing a conceptual understanding of the selected mathematics concept. Only one representation of the mathematics concept(s) is portrayed in student's personal engagement of the work.   | Student is not demonstrating/sharing work evident of relearning or a deeper understanding of the math concept.  |
| <b>Relearning math concept with reflections on course readings. Personal insight gained through engaging in the mathematical thinking/processes.</b><br>(30%) | Student can demonstrate a robust understanding of their relearning/unpacking a math concept with excellent (meaningful) references to the course readings or resources that are specifically related to mathematics thinking, teaching and learning.<br><br>Students' reflections are clear with articulating new insights gained from the math work. | Student demonstrates a good understanding of course readings about mathematical thinking, learning and teaching. Moderate references made with meaningful connections to the student's work.<br><br>Students' reflections show some insight regarding personal insight gained from this math work. | Student is still developing an understanding of the course readings regarding mathematical thinking, learning and teaching. Minimal references are made that have meaningful connections to the student's work.<br><br>Students' reflections show a developing stage of understanding how mathematical thinking and relearning/unpacking | Student does not understand the course readings regarding mathematics thinking, learning and teaching. No meaningful references are made regarding their work.<br><br>Students' reflections are not insightful or relevant to the mathematics work presented in this learning task. |

|   |   |  |   |   |
|---|---|--|---|---|
|   |   |  | a math concept informs teaching.  |   |
| <b>Correct citations of course readings and other resources (10%)</b>   | The references are properly cited in APA 7 <sup>th</sup> edition.   | There are one to two mistake(s) found in the APA 7 references (e.g. missing comma, period, italics, etc.).                                     | There are three to four mistakes in the APA 7 references.   | There are more than four mistakes in the APA 7 reference list.  |
| <b>Organization and Presentation Clarity (10%)</b>  | Students' presentation of mathematical learning is easy to follow (has a beginning, middle, end, and future considerations for mathematics learning and teaching).                    | Students' presentation of mathematical learning has some key points, sections of work may lack clarity or relatability to the course readings. | Students' presentation of mathematical learning is difficult to understand and does not present a progression of developing a deeper understanding of the mathematical concept. | Student is unable to present a coherent demonstration of work and learning.   |
| <b>Addressing Future Applications for the Mathematical Knowledge Learned and Presented in this Assignment (10%)</b> | Student clearly articulates how (such as what grade or specific learning outcomes) their new mathematical knowledge can be used for the future work of teaching.                      | Student communicates some insight about how their new mathematical knowledge can be applied in their future work of teaching.                  | Student is still developing an understanding about how new mathematical understandings from relearning a math concept can assist their future work of teaching.                 | Student does not mention any future applications of their presented mathematical knowledge.   |
| <b>Informal sharing of a mathematical insight(s) gained from your mathematics work (10%)</b>                        | Student is well prepared and shares a sample of learning that will benefit the collective. Clear communication/presentation of insight/activity/manipulative benefits the collective. | Student shares a sample of learning. Students is mostly prepared with clear communication/presentation of insight and/or material.             | Student shares a sample of learning but lacks insight that can benefit the collective.<br><br>Student is mostly prepared for sharing a sample of work for the collective.       | Student does not share any learning insight that benefits the collective.<br><br>Student does not clearly communicate/present insight in a manner that benefits the collective. |

### **LT3: Building Understanding of STEM through the Engineering Design Process (30%) – Due: December 5**

\* Instructor will have final decision on which technology *may* be used for the STEM design. The software list in the course resources are suggestions, if and when the instructor requires student use of such resources. Instructor may incorporate other software/hardware not included in that list.

The group (maximum of 4 members) will design a STEM challenge for *Making the World a Better Place*. This STEM challenge will clearly reflect the engineering design process, address an authentic real-world problem, and state for whom this real-world design will benefit (purpose). The main curriculum content can include any disciplinary area (or multiple disciplinary areas) in conjunction with specific mathematics content and science content (from Alberta Education Curriculum). Students are expected to design this STEM challenge keeping in mind how this could be addressed/implemented in a grade school classroom. Keep a reflection record of the group's design process for creating this STEM challenge, as this will be a part of the group assessment.

This design STEM challenge will:

- State a description of the STEM challenge;
- incorporate interdisciplinary problem solving through engaging the STEM disciplinary processes (scientific inquiry, mathematical thinking, computational thinking, and engineering design process);
- engage students in collaborative team work;
- explicitly describe which learning outcomes from Alberta Education curriculum (including grade and discipline) with math and science curriculum outcomes being addressed in the STEM challenge, along with reasoning for why these learning outcomes were selected for this STEM challenge.

Presentation: The format for which the group will share the STEM challenge will be through an appropriate medium that is suitable for demonstrating the STEM challenge description, processes, and learning outcomes. This format will be discussed with the instructor.

Group members will receive the same grade.

### Criteria For Assessment of Learning Task 3

| Design Challenge  | Excellent (A+ to A)   | Good (A- to B)   | Satisfactory (B- to C)  | Unsatisfactory   |
|---|---|--|---|--|
| <b>Challenge</b><br><br><b>(30%)</b>  | -Created an authentic, and problem-based STEM challenge, that centralizes the theme of <i>Making the World a Better Place</i> .<br>-There is clear communication about a real world <i>need</i> for this design and how (and whom) the design may benefit.<br>-All of the interdisciplinary processes are clearly incorporated into the STEM challenge. | -Created a STEM challenge that is authentic, that touches upon the theme of <i>Making the World a Better Place</i> .<br>-There is moderate communication about the real world <i>need</i> for this design and how (and for whom) this design may benefit.<br><br>-Most of the interdisciplinary processes are evident in the STEM challenge. | -Created a STEM challenge but does not accurately reflect the expectation for this challenge. -There is no communication about the <i>need</i> for the design and how (whom) this design may benefit.<br>-Only two processes are evident in the STEM challenge.         | Did not create STEM challenge.<br><br>It is not clear how interdisciplinary problem-solving is used in this challenge.   |
| <b>Concept Identifications and Rationale</b><br><br>Minimum to incorporate-<br>Mathematics x 2<br>Science x 1<br><br><b>(25%)</b> | All math and science learning outcomes are clearly, accurately, and sufficiently identified and developed within the challenge.<br>-Direct connections are made to the Alberta curriculum.<br>-Reasoning for why these math and science concepts were clearly articulated.  | -Most concepts are accurately identified and developed within the challenge.<br>-Connections are made to the Alberta curriculum.<br>-More detail is required, or a learning outcome does not have a relevant connection for the work.<br>- Reasoning for why the concepts were selected for the challenge lacks sufficient description.      | -Concepts are insufficiently identified, underdeveloped, and/or missing.<br>-Reasoning for why the concepts were selected for the STEM challenge are not sufficient or underdeveloped.<br>-The ways the concepts are connected or addressed by the challenge are vague. | -Concepts are not stated and/or inaccurate.<br>-Reasoning for why the concepts were selected was not stated.<br>Concept connections to the STEM challenge are not evident. |

|  |   |  |   |  |
|--|---|--|---|--|
| <b>Engineering Design Process</b><br><br>(25%)                   | -Describe and reflect on the engineering design process that future students and yourselves engaged in for this STEM challenge.<br>-Clearly articulated how this design process informed your learning as a future math/science teacher.<br>-Clear sharing of the group's design messy work during the design process of creating the STEM challenge. | -Description of components for the engineering design process are described for the potential future students of this STEM challenge.<br>-The group mentions how the design process will inform future teaching practices.<br>-The group's messy work provides some insight into the design process. | -Components of the engineering design process are not included.<br>-The group does not provide an in-depth or clear description of how the design process informs their future teaching practice.<br>-The group's design messy work does not adequately reflect the process for creating this STEM challenge. | Does not articulate an engineering design process.   |
| <b>Presentation</b><br>(in-class)<br><br>(15%)<br><br>APA 7 (5%) | Presentation of challenge is ready, easily accessible to understand the purpose and learning outcomes. STEM Education goals and processes are clearly articulated and evident.  | Presentation of challenge is ready and mostly accessible to understand the purpose and learning outcomes. STEM Education goals and processes are somewhat evident and/or articulated.  | Presentation of challenge is mostly ready. Group work is still developing in the purpose and clarity of the learning outcomes. STEM Education goals and processes are not clear or evident.   | Presentation is not ready and/or does not provide the purpose or any connection to curricular learning outcomes. |

### THE EXPECTATION OF EXCELLENCE IN PROFESSIONAL WORK

Please review the Academic Calendar carefully. It describes the program and provides detailed schedules and important dates. It contains information on expectations for student work and professional conduct. In addition, procedures are described regarding concern about student performance in the program. Please pay especially careful attention to details and descriptions in the following topic areas:

- The Importance of Attendance and Participation in Every Class*

As this is a professional program, experiences are designed with the expectation that all members will be fully involved in all classes and in all coursework experiences. As you are a member of a learning community your contribution is vital and highly valued, just as it will be when you take on the professional responsibilities of being a teacher.

- Engagement in Class Discussion and Inquiry*

Another reason for the importance of attendance and participation in every class is that the course involves working with fellow students to share ideas and thinking. For example, each class you will work with a small group to engage fellow students in discussions on work being considered in class. You will also help other groups by providing ideas for scholarly inquiry in assignments. If you find that you are experiencing difficulties as a group collaborating, please inform the instructor.

### EXPECTATIONS FOR WRITING

All written assignments (including, to a lesser extent, written exam responses) will be assessed at least partly on writing skills. Writing skills include not only surface correctness (grammar, punctuation, sentence structure, etc.) but also general clarity and organization. Sources used in research papers must be properly documented. If you need help with your writing, you may use the writing support services in the Learning Commons. For further information, please refer to the official online University of Calgary Calendar, Academic Regulations, E. Course Information, E.2: Writing Across the Curriculum: <https://calendar.ucalgary.ca/pages/2c2d1ce47b8c4d008aec9cc3da49876e>

### MISSING OR LATE SUBMISSIONS

All late submissions of assignments must be discussed with the instructor **prior to the due date**. A deferral of up to 30 days may be granted at the discretion of the Associate Dean of Undergraduate Programs prior to the end of the course with accompanying written evidence. <https://calendar.ucalgary.ca/pages/jyekfh6xwhoHwxcetCi1>

### ISSUES WITH GROUP TASKS

With respect to group work, if your group is having difficulty collaborating effectively, please contact the instructor immediately. If a group is unable to collaborate effectively or discuss course materials online in a timely manner, the instructor may re-assign members to different groups or assign individual work for completion.

**GRADING:** <https://calendar.ucalgary.ca/pages/fc4adb8643f84441ab32300237b80df1>

| Grade | GPA Value | %            | Description  |
|-------|-----------|--------------|--|
| A+    | 4.0       | 95-100       | Outstanding  |
| A     | 4.0       | 90-94        | Excellent – Superior performance showing comprehensive understanding of the subject matter   |
| A-    | 3.7       | 85-89        |  |
| B+    | 3.3       | 80-84        |  |
| B     | 3.0       | 75-79        | Good - clearly above average performance with knowledge of subject matter generally complete |
| B-    | 2.7       | 70-74        |  |
| C+    | 2.3       | 65-69        |  |
| C     | 2.0       | 60-64        | Satisfactory - basic understanding of the subject matter                                     |
| C-    | 1.7       | 55-59        |  |
| D+    | 1.3       | 52-54        | Minimal pass - Marginal performance  |
| D     | 1.0       | 50-51        |  |
| F     | 0.0       | 49 and lower | Fail - Unsatisfactory performance  |

#### Academic Misconduct

Academic Misconduct refers to student behavior which compromises proper assessment of a student's academic activities and includes cheating; fabrication; falsification; plagiarism; unauthorized assistance; failure to comply with an instructor's expectations regarding conduct required of students completing academic assessments in their courses; and failure to comply with exam regulations applied by the Registrar.

For information on the Student Academic Misconduct Policy and Procedure please visit:

<https://www.ucalgary.ca/legal-services/university-policies-procedures/student-academic-misconduct-policy>

<https://www.ucalgary.ca/legal-services/university-policies-procedures/student-non-academic-misconduct-policy>

Additional information is available on the Academic Integrity Website at: <https://ucalgary.ca/student-services/student-success/learning/academic-integrity>

### **Academic Accommodation**

It is the student's responsibility to request academic accommodations according to the University policies and procedures listed below. The student accommodation policy can be found at: <https://ucalgary.ca/student-services/access/prospective-students/academic-accommodations>.

Students needing an accommodation because of a disability or medical condition should communicate this need to Student Accessibility Services in accordance with the Procedure for Accommodations for Students with Disabilities: <https://www.ucalgary.ca/legal-services/sites/default/files/teams/1/Policies-Accommodation-for-Students-with-Disabilities-Procedure.pdf>

Students needing an accommodation in relation to their coursework or to fulfill requirements for a graduate degree based on a Protected Ground other than Disability, should communicate this need, preferably in writing, to the designated contact person in their faculty. The course outline should clearly list the appropriate Faculty contact person(s) and their contact details. For further information see E.1 C. Course Policies and Procedures <https://calendar.ucalgary.ca/pages/a89ecfbf758841b5983c4b67746e7846>

### **Research Ethics**

Students are advised that any research with human participants – including any interviewing (even with friends and family), opinion polling, or unobtrusive observation – must have the approval of the Conjoint Faculties Research Ethics Board (<https://research.ucalgary.ca/conduct-research/ethics-compliance/human-research-ethics/conjoint-faculties-research-ethics-board-cfreh>) or the Conjoint Health Research Ethics Board (<https://research.ucalgary.ca/conduct-research/ethics-compliance/human-research-ethics/conjoint-health-research-ethics-board-chreh>)

In completing course requirements, students must not undertake any human subjects research without discussing their plans with the instructor, to determine if ethics approval is required. Some courses will include assignments that involve conducting research with human participants; in these cases, the instructor will have applied for and received ethics approval for the course assignment. The instructor will discuss the ethical requirements for the assignment with the students.

For further information see E.5 Ethics of Human Studies  
<https://calendar.ucalgary.ca/pages/627ed88eb4b041b7a2e8155effac3501>

### **Instructor Intellectual Property**

Course materials created by instructors (including presentations and posted notes, labs, case studies, assignments and exams) remain the intellectual property of the instructor. These materials may NOT be reproduced, redistributed or copied without the explicit consent of the instructor. The posting of course materials to third party websites such as note-sharing sites without permission is prohibited. Sharing of extracts of these course materials with other students enrolled in the course at the same time may be allowed under fair dealing.

### **Freedom of Information and Protection of Privacy**

Student information will be collected in accordance with typical (or usual) classroom practice. Students' assignments will be accessible only by the authorized course faculty. Private information related to the individual student is treated with the utmost regard by the faculty at the University of Calgary. For more information, please see: <https://www.ucalgary.ca/legal-services/access-information-privacy>

### **Copyright Legislation**

All students are required to read the University of Calgary policy on Acceptable Use of Material Protected by Copyright (<https://www.ucalgary.ca/legal-services/university-policies-procedures/acceptable-use-material->

protected-copyright-policy) and requirements of the copyright act (<https://laws-lois.justice.gc.ca/eng/acts/C-42/index.html>) to ensure they are aware of the consequences of unauthorised sharing of course materials (including instructor notes, electronic versions of textbooks etc.). Students who use material protected by copyright in violation of this policy may be disciplined under the Non-Academic Misconduct Policy <https://www.ucalgary.ca/legal-services/university-policies-procedures/student-non-academic-misconduct-policy>.

### **Sexual and Gender-Based Violence Policy**

The University recognizes that all members of the University Community should be able to learn, work, teach and live in an environment where they are free from harassment, discrimination, and violence. The University of Calgary's sexual violence policy guides us in how we respond to incidents of sexual violence, including supports available to those who have experienced or witnessed sexual violence, or those who are alleged to have committed sexual violence. It provides clear response procedures and timelines, defines complex concepts, and addresses incidents that occur off-campus in certain circumstances. Please see the policy available at <https://www.ucalgary.ca/legal-services/university-policies-procedures/sexual-and-gender-based-violence-policy>

### **Other Important Information**

Please visit the Registrar's website at: <https://www.ucalgary.ca/registrar/registration/course-outlines> for additional important information on the following:

- Wellness and Mental Health Resources
- Student Success
- Student Ombuds Office
- Student Union (SU) Information
- Graduate Students' Association (GSA) Information
- Emergency Evacuation/Assembly Points
- Safewalk

**The Freedom of Information Protection of Privacy Act** prevents instructors from placing assignments or examinations in a public place for pickup and prevents students from access to exams or assignments other than their own. Therefore, students and instructors may use one of the following options: return/collect assignments during class time or during instructors' office hours, students provide instructors with a self-addressed stamped envelope, or submit/return assignments as electronic files attached to private e-mail messages.

**For additional resources including, but not limited to, those aimed at wellness and mental health, student success or to connect with the Student Ombuds Office, please visit**

<https://www.ucalgary.ca/registrar/registration/course-outlines>

**Education Students Association (ESA)** President for the academic year is Tracy Dinh, [esa@ucalgary.ca](mailto:esa@ucalgary.ca).

**Werklund SU Representative** is Siena Yee, [educrep@su.ucalgary.ca](mailto:educrep@su.ucalgary.ca).
